Perfect for in-house catering and for catering outside the building – BLANCO INMOTION dishes, cloche and tray systems

With passive food distribution systems the food is held at a certain temperature following portioning and no longer actively heated or cooled. BLANCO INMOTION has several highly efficient products to ensure the food is transported from the kitchen to the patient/guest without a loss of temperature or vitamins. A matched line of dishes rounds off the product range.

1

2

- 1 The demanding solution: Stainless-steel heat-retaining set. Consisting of a heat-retaining lower base with a wax core and a matching cloche.
- 2 The basic solution: Heat-retaining set of high-quality, insulating synthetic. Consisting of an insulating lower base and a matching cloche for a plate or soup bowl.
- 3 Of course, a stainless-steel heat-retaining lower base can also be combined with a synthetic insulating cloche.

3

INMOTION
Dishes, tray and
cloche systems

The tray solution for catering outside the building:

Heat-retaining set with a compact tray format. All food is covered with a single synthetic lid that simultaneously insulates four tray areas completely separately from each other. Optimally suited for the Quadro system plate.

BLANCO CASA for catering outside the building:

No deterioration of the food quality may result if the food has to cover long distances from the kitchen to the patient/guest.

BLANCO INMOTION offers the BLANCO CASA system element to reliably prevent this. Equipped with an efficiently insulating polypropylene upper and lower shell with cut-outs for porcelain, hot and cold food are reliably kept fresh simultaneously.

BLANCO INMOTION: The system is the star.

Whether it's Cook & Serve, Cook & Chill or Cook & Freeze, whether it's a tray or container system, the BLANCO INMOTION product line offers you all the options for your customized food distribution concept.

With BLANCO INMOTION you decide on perfectly matched products for the optimization of your processes. The basic analysis of your requirements and careful consulting can be included in the package of services on request.

In the process, country-specific standards, temperature requirements and regulations are taken into account, as is the option of complete, HACCP-compliant documentation.

The ergonomic design, first-class finishing and the high-quality, hygienic materials make daily work easier for the personnel. Even more: In the long term they help you with healthy management. And make BLANCO INMOTION an investment in the future that's worth every cent.

BLANCO INMOTION. System solutions on the move.
